SUMMARY

Privacy Engineer with experience building scalable privacy automation, governance, and compliance solutions across enterprise environments. Skilled in translating regulatory and operational privacy requirements into technical workflows, internal tooling, and SDLC-integrated processes. Background includes privacy risk assessments, technical audits, data retention implementation, AI-assisted automation, and development of internal knowledge and compliance systems using Java, SQL, workflow automation, and RAG-based architectures.

PROFESSIONAL EXPERIENCE

Geotab | *Privacy Analyst Intern* **Jan 2026 - Present**

- Engineered a GDPR Article 30 (ROPA) discovery and classification platform using Java, Python, React, BigQuery, and GCP APIs to identify PII-bearing assets across enterprise data stores, automate processing activity mapping, and reduce reliance on manual privacy inventory workflows.
- Architected a modular parent-child AI skill framework that routes requests to specialized automation tools, streamlining privacy assessments, RFX responses, and other compliance workflows through automated processing and human oversight.
- Developing an EU AI Act discovery solution to identify AI/ML usage across enterprise systems, integrating AI-assisted evidence classification and collaborating with Security Engineering to evaluate scanner integration and expand discovery coverage.
- Developing data analytics and monitoring solutions for Interoperability Signals, including battery-health and firmware-regression dashboards and a beta-stage detection pipeline leveraging historical cases to identify potential battery-drain issues earlier.
- Contributed to Enterprise Data Retention implementation, translating privacy policies into SQL-based deletion rules and retention logic to support compliant data lifecycle management.

Accent CPA | *Software & Systems Engineer* **Jul 2025 - Dec 2025**

- Designed and built an internal RAG-based AI knowledge assistant with Java (Spring Boot), PostgreSQL (pgvector), React, and Ollama, enabling staff to retrieve firm and client documents through natural-language queries and improving information access
- Implemented document ingestion pipelines that pulled files from OneDrive and TaxDome, processed over 250 GB of unstructured PDFs for embedding and retrieval within a LAN-restricted environment, enabling faster search and access to client records
- Developed the firm's public-facing website using React, translating a designer-provided layout into a responsive, production-ready application that improved client navigation and lowered bounce rates
- Automated internal workflows in TaxDome to improve task routing, document requests, and visibility across bookkeeping and client-service processes

TikTok(via Solvd Inc.) | *Senior Privacy Specialist* **Aug 2024 - May 2025**

- Designed and built a privacy compliance framework for 150+ product features, defining policy requirements, mitigation standards, and audit procedures; the framework streamlined audit preparation and increased coverage of privacy controls, leveraging data flow analysis and CI/CD pipelines
- Translated high-level regulatory mandates into technical privacy controls, enabling engineers to adopt privacy requirements early in the SDLC
- Created standardized documentation and requirements on expected technical evidence (e.g., code snippets, configuration, data flow) to streamline the compliance verification process for engineering teams and ensure traceability for compliance audits
- Worked with the Incident Response team to verify and document remediation fixes after security and privacy events, using Nmap and Selenium WebDriver to confirm effectiveness and improve the organization's security readiness

Meta(via Solvd Inc.) | *Test Automation Engineer* **Jul 2022 - Jul 2024**

- Reviewed and decomposed regulatory commitments into actionable mitigations, building an audit-ready structure that streamlined evidence collection and accelerated audit readiness for the security team
- Audited technical evidence such as code, automated tests, database tables, and ACLs, helping identify compliance gaps early and improving the completeness and accuracy of security audit trails
- Integrated into the Privacy Engineering team and SDLC to review new microservices and data flows for security and privacy risks, enabling early identification and mitigation of issues before deployment
- Evaluated LLM models for bias and data-risk exposure, helping identify vulnerabilities early and advising on mitigation steps that strengthened responsible-AI practices

- Proactively requested new evidence from engineers when controls were insufficient, and drove the deprecation process for non-active commitments and mitigations, ensuring the security posture was current and accurate

TECHNICAL SKILLS

- **Programming**: Java, Python, JavaScript, SQL
- **Frameworks & Tools**: Spring Boot, React, Selenium WebDriver, TestNG, JUnit, Rest Assured, Maven
- **AI & Automation**: RAG systems, LLM integration, workflow automation
- **Cloud & DevOps**: Docker, Linux, CI/CD (Jenkins), Git, GitLab, GitHub
- **Privacy & Compliance**: Technical audits, GDPR/CCPA practices, data flow analysis, privacy risk mitigation, access control review
- **Project Management**: Jira

EDUCATION

Old Dominion University | ***Bachelor of Science, Cybersecurity*** **(GPA: 3.8)** **Jun 2024 - May 2026**

Tidewater Community College | ***Associate of Applied Science, Cybersecurity*** **Dec 2022**

CERTIFICATIONS

- CompTIA : Security+
